Adding Transitions to a Video in Jaycut

This guide will cover how to add transitions to a video in the browser-based video editing program Jaycut.

**Step 1**
Make sure the items in the video are alternating in position between reel A and reel B in the Jaycut studio, with each item placed on the opposite reel as the last. Additionally, slightly overlap the clips so that a transition can be added.

**Step 2**
Next drag and drop transitions into the small area between the two reels marked “Transitions.” Make sure to put the transition in the small area that is overlapped by two clips.

**Step 3**
Once the transitions are in place, preview the video to make sure they are working correctly.
